TB-0338
IPLANET To Sun One Migration

Issue Date: April 15, 2004
Effective Date: May 10, 2004
Section/Group: Network Operations
Submitted by: Norm Johnson
Approved by: Marsha Dotson, Darcie Trimble, Norm Johnson

Sun One is the latest upgrade to IPLANET, and is the new production environment within ITS. Several State agencies use the ITS server named "Agency Dev" to build applications compatible with IPLANET. Effective May 10, 2004, this server will no longer be available for new IPLANET applications. On that date, ITS will reconfigure the "Agency Dev" server, upgrading to a Sun One development environment.

The intent of this reconfiguration is to migrate agency applications to the upgraded Sun One environment while continuing to provide agencies with the capability to develop applications, just as they did in the old IPLANET environment.

Questions regarding this reconfiguration should be addressed to the Customer Relationship Manager assigned to your agency. Phone numbers and contacts for your CRM are available on the ITS Internet site, at www.its.utah.gov, under the "About ITS" drop down menu.
